Business Innovation

- Educational underachievement also points to a lack of innovation in patents.
 - No Texas city is included in the top 10 metropolitan areas with the greatest number of patents in the nation.
 - This is especially important because patents and innovation are a vital link between postsecondary education and business investment and growth.
 - Also, none of Texas' top institutions were ranked in the national top 25 trailblazers for innovation in academia.
 - Education Impact: Colleges and universities will continue to struggle with funding and financial aid for their students if there is no competition or innovation at Texas universities.
 - Business Impact: If there is no innovation in business, Texas' economy will stagnate and there will be a corresponding drop in high-paying job creation.
